Sodium lauryl sulfate	151-21-3	10%		Organic salt, Carboxylic acid salt	Unknown	Category 1/Category 2A	Category I/Category II	R41/Nonirritant	Moderate	Irritant	Irritant	Kojima et al. (1995)
Triton X-100	9002-93-1	10%		Ether	Unknown	Category 1	Category II	SCNM	Moderate	Irritant	Irritant	Kojima et al. (1995)

Abbreviations: CASRN = Chemical Abstracts Service Registry Number; Conc. = concentration; EPA = U.S. Environmental Protection Agency; EU = European Union; GHS = Globally Harmonized System; SCNM = study criteria not met.

<sup>1</sup> GHS=Globally Harmonized System (UN 2007)

<sup>2</sup> Eye Irritant Category 1 = irreversible effects on the eye/serious damage to the eye; Category 2A = reversible effects on the eye/irritating to the eyes; Category 2B = reversible effects on the eye/mildly irritating to the eyes; Nonirritant = not an eye irritant.

<sup>3</sup> EPA=U.S. Environmental Protection Agency (EPA 2003a).

<sup>4</sup> Toxicity Category I for the Primary Eye Irritation Study = Corrosive, or corneal involvement or irritation not reversible within 21 days; Category II = Corneal involvement or irritation clearing in 8-21 days; Category III = Corneal involvement or irritation clearing in 1-7 days; Category IV: minimal effects clearing in less than 24 hr

<sup>5</sup> EU=European Union (EU 2001).

<sup>6</sup> Risk phrase R41 = risk of serious damage to the eyes; R36 = irritating to the eyes; nonirritant = not an eye irritant.

<sup>7</sup> IS(A) represents irritation scores that were calculated using the method described in Luepke (1985); classification scheme used as described in Luepke (1985).

<sup>8</sup> FHSA=Federal Hazardous Substance Act (2005). FHSA-20% is based on the proportion of positive animals needed to identify a substance as an irritant using the FHSA sequential testing strategy, where 20% of the animals need to demonstrate a positive response for a substance to be identified as an irritant. A substance tested using 3 to 6 animals would not be labeled if  $\leq 1/6$  animals were positive based on the FHSA criteria. The substance would be labeled as an irritant if there were  $\geq 1$  positive animal in a 3 to 5 animal test or  $\geq 2$  positive animals in a 6 animal test.

<sup>9</sup> FHSA=Federal Hazardous Substances Act (2005). FHSA-67% is based on the proportion of positive animals needed to identify a substance as an irritant using the "first test" of the FHSA sequential testing strategy, where 67% of the animals need to demonstrate a positive response for a substance to be identified as an irritant. A substance tested using 3 to 6 animals would not be labeled if  $\leq 1/6$  animals were positive based on the FHSA criteria. The substance would be labeled as an irritant if there were  $\geq 2/3$ ,  $3/4$ ,  $4/5$ , or  $4/6$  positive animals. If  $1/3$ ,  $1/4$ ,  $2/4$ ,  $1/5$ ,  $2/5$ ,  $3/5$ ,  $2/6$ , or  $3/6$  animals were positive, further testing would be required.
