Subject: RE: Iso E Super

Hello Dr. Scott Masten,

I am in support of having Iso E Super chemical reviewed for it's toxicity. It is in many fragranced products, and was found to be in the perfume, Calvin Klein's Eternity. Many people buy and use this harmful perfume, and they are innocent unsuspecting consumers, harming themselves and others in their company. I have been disabled from repeated exposures to perfumes for eleven years, and it can happen to anyone...or you might develop a neurological or central nervous system disease, or possibly cancer, and never equate it to the product or products. It's time the insanity stopped, as these chemicals are killing people, polluting the air we must all share, our water supplies, not to mention they are horribly falsely advertised, so law suits will one day be inevitable. Ignoring problems do not make them go away. We need common sense, not common Scents.

Thank you,
