

Study Director and IACUC

Responsibilities:

Consideration of Available Reduction, Refinement, and Replacement Alternative Test Methods

Jodie A. Kulpa-Eddy, D.V.M.

U.S. Department of Agriculture

Animal and Plant Health Inspection Service

Animal Welfare Act (P.L. 89-544)

1985 amendments

The standards shall include requirements that:

- “...ensure animal pain and distress are minimized...”
 - “...that the principal investigator considers alternatives to any procedure likely to produce pain or distress in an experimental animal...”
-

Study Director

- FDA 58.3(m)
The individual responsible for the overall conduct of a nonclinical laboratory study.
 - EPA 792.3
The individual responsible for the overall conduct of a study.
 - OECD Section I (2.2.6)
The individual responsible for the overall conduct of the nonclinical health and environmental safety study.
-

Principal Investigator

- OECD Section I

2.2.7. Principal Investigator means an individual who, for a multi-site study, acts on behalf of the Study Director and has defined responsibility for delegated phases of the study. The Study Director's responsibility for the overall conduct of the study cannot be delegated to the Principal Investigator(s); this includes approval of the study plan and its amendments, approval of the final report, and ensuring that all applicable Principles of Good Laboratory Practice are followed.

Principal Investigator

- USDA 9 CFR Section 1.1

An employee of a research facility, or other person associated with a research facility, responsible for a proposal to conduct research and for the design and implementation of research involving animals

Animal Welfare Regulations

9CFR, Section 2.31(e)(2):

- A proposal to conduct an activity involving animals, or to make a significant change in an ongoing activity involving animals, must contain the following:
 - A rationale for involving animals, and for the appropriateness of the species and number of animals to be used.
 - A description of procedures designed to assure that discomfort and pain to animals will be limited to that which is unavoidable for the conduct of scientifically valuable research...
-

Animal Welfare Regulations

Requires application of all 3 R's:

- Replacement:
 - Justify use of animals
 - Justify appropriateness of the species
 - Reduction:
 - Justify number of animals
 - Assure no unnecessary duplication
 - Refinement:
 - Assure that pain and discomfort will be limited to that which is unavoidable
-

Animal Welfare Regulations

9 CFR, Section 2.31(d)(1)(ii):

- The principal investigator has considered alternatives to procedures that may cause more than momentary or slight pain or distress to the animals, and has provided a written narrative description of the methods and sources, *e.g.*, the Animal Welfare Information Center, used to determine that alternatives were not available;
-

Consideration of Alternatives

- Adequate information for the IACUC to assess if a reasonable and good faith effort was made to determine the availability of alternatives or alternative methods
 - If a *bona fide* alternative is identified but not used, the narrative should explain why
-

Consider what are “alternatives”

Replacement

- *In vitro* test systems
- Organisms with lower sentience

Reduction

- Appropriate statistical design
 - Replace some of the animals with non-animal techniques
-

Consider what are “alternatives”

Refinement:

- Modifications to the protocol that reduce pain or distress to the animal (e.g., better pain control, positive rather than negative reinforcements for training)
 - Modifications that enhance animal well-being (e.g., group housing instead of individual, nesting material, foraging activities)
-

Mandated Regulatory Testing

- Cite the regulation or agency guideline requiring the specific test
- Ensure use of appropriate humane end-point
- Explain reason for not using a validated, agency-accepted alternative

U.S. Government Principles

- III. The animals selected for a procedure should be of an appropriate species and quality and the minimum number required to obtain valid results. Methods such as mathematical models, computer simulation, and in vitro biological systems should be considered.
- IV. Proper use of animals, including the avoidance or minimization of discomfort, distress, and pain when consistent with sound scientific practices, is imperative. Unless the contrary is established, investigators should consider that procedures that cause pain or distress in human beings may cause pain or distress in other animals.

Guide for the Care and Use of Laboratory Animals

Endorses the following principles:

- Consideration of alternatives (in vitro systems, computer simulations, and/or mathematical models) to reduce or replace the use of animals
- Avoidance or minimization of discomfort, distress and pain

Directive 2010/63/EU

Article 13

Choice of methods

1. Without prejudice to national legislation prohibiting certain types of methods, Member States shall ensure that a procedure is not carried out if another method or testing strategy for obtaining the result sought, not entailing the use of a live animal, is recognised under the legislation of the Union.
2. In choosing between procedures, those which to the greatest extent meet the following requirements shall be selected:
 - (a) use the minimum number of animals;
 - (b) involve animals with the lowest capacity to experience pain, suffering, distress or lasting harm;
 - (c) cause the least pain, suffering, distress or lasting harm;and are most likely to provide satisfactory results.
