Rear Admiral William S. Stokes
Director
National Toxicology Program Interagency Center
For the Evaluation of Alternative Toxicological Methods
National Institute of Environmental Health Services
P.O. Box 12233, Mail Code K2-16
Research Triangle Park, NC 27709

Dear Admiral Stokes:

This letter is in response to a request from Dr. Linda Birnbaum, Director, National Institute of Environmental Health Services, requesting the National Cancer Institute's (NCI) response to a report from the Interagency Coordinating Committee on the Validation of Alternative Methods (ICCVAM) regarding the test method recommendations for the LUMI-Cell Estrogen Receptor (ER) BG11Luc Estrogen Receptor (ER) Transcriptional Activation (TA) test method.

Staff in the NCI Division of Cancer Biology reviewed the report (NIH Publication Number 11-7850) and found the recommendations are consistent with the ICCVAM efforts to facilitate the scientific evaluation and adoption of test methods that will help protect human health and the environment while providing for improved animal welfare whenever possible.

The NCI is not one of the Federal agencies that promulgate regulations or guidelines regarding test methods or test method protocols and performance standards. We thus do not have relevant test methods for which ICCVAM test recommendations may be added or substituted.

Thank you for the opportunity to review these documents.

Sincerely,

/s/

Harold Varmus, M.D.
Director
National Cancer Institute

Cc: T. Kevin Howcroft, Ph.D.
NCI ICCVAM Principal Agency Representative
