<i>Michael Vaughan</i> Private Citizen	<p>I am writing to urge you to inform the U.S. public about the NTP Study findings and not to 'play down' the findings just because we have not yet identified the exact mechanism of harm caused by EMF exposure.</p>
	<p>As you will know, the 'Safety Standards' for exposure to EMF in the U.S. are among the highest in the world. Many countries including Austria, Israel and even Russia have much more protective standards. Not two or three times more protective, but hundreds or thousands of times more protective.</p> <p>While more research is of course required, the NTP study surely gives enough grounds for concern for Safety Standards in the U.S. and around the world to be reviewed as a matter of urgency.</p>
<i>Pat</i> Private Citizen	<p>People have the right to know what affects their health. Company profits are not the most important things in this world but unfortunately they seem to dominate anything that contradicts corporates bottom line.. We want to know how EMF affects our health . I urge you to do the right thing.</p>
<i>Sikandar Jameel</i> Private Citizen	<p>The link to this article by Dr. Mercola is https://articles.mercola.com/sites/articles/archive/2018/02/21/cellphone-radiation-linked-to-tumors.aspx .</p> <p>Clearly something must be done. The Telecom Industry will not do anything unless government and people demand it.</p> <p>Thank you.</p>
