<p>Carol Savage Private Citizen</p>	<p>Greetings!</p> <p>Americans need to know the FACTS, apart from big-pharma's perspective, and independent of the telecom industry. Science, based on animal studies, indicate that there is a possible risk cellphone RF [radio frequency] which is potentially carcinogenic in humans. Please do not allow influential dollars to override our right to be show the actual effects of RF on our bodies.</p> <p>If indeed, there is massive whitewashing catalyzed by the telecommunications industry to suppress the truth and expose us to dangerous levels of EMF so they can increase their profits, we should be told the truth! We need to know how to protect ourselves from the effects.</p> <p>Thank you,</p> <p><i>Joyfully!</i> Carol Savage</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p>
<p>Jean Oliphant Private Citizen</p>	<p>I am urging you to work to alter the emissions from cell phones that we are now using for everything. From all I have read on the subject - for many years now - there is damage being done by their emissions and I would like to see more being done to correct this situation. Children are particularly vulnerable. From what I can see not many people are buying/using the blue tube earphones (not blue tooth, which can exacerbate the situation) but the earphones with the little blue tubes that reduce the emissions from the phone. (You can buy them online.) Just holding the phone away from the ear helps. What can be done?? I think it's something within our power to change!!</p> <p>Thank you??</p> <p>Jean Oliphant</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p>
