

Glossary

A

- abasic site** a location in DNA that lacks a purine or pyrimidine base
- acaricide** a pesticide that kills mites and ticks
- acceptable ceiling concentration** as defined by the Occupational Safety and Health Administration, the level of an air contaminant to which an employee may be exposed at any time during an 8-hour shift, except for a time period and up to a concentration not exceeding the maximum duration and concentration listed as the acceptable maximum peak above the acceptable ceiling concentration for an 8-hour shift
- acinar cells** cells in the pancreas that secrete enzymes
- actinic keratoses** skin lesions induced by exposure to ultraviolet light
- acute** of short duration, rapidly progressing, or of high severity; in testing of rodents, refers to administration of an agent in a single dose
- adduct** a complex that forms when a chemical binds to a biological molecule, such as DNA or a protein
- adenine** one of the two purine bases in DNA; pairs with thymine
- adenocarcinoma** a malignant tumor of epithelial tissue in which the cells form a gland-like structure
- adenoma** a benign neoplasm of epithelial tissue in which the cells form glands or gland-like structures
- adenomatous polyp** a benign polyp originating in the epithelium of the rectum, colon, or stomach
- adipose tissue** fatty tissue
- adjuvant therapy** therapy involving both a primary treatment and an additional treatment that enhances the action of the primary treatment
- adrenal cortex** the outer portion of the adrenal gland
- adrenal gland** a hormone-secreting organ located above each kidney
- adrenal medulla** the inner portion of the adrenal gland
- aerobic** pertaining to biological processes that require oxygen
- aerodigestive tract** the combined organs and tissues of the respiratory tract and the upper part of the digestive tract
- aerodynamic diameter** a physical property of a particle or fiber of irregular shape that describes its aerodynamic behavior (how it moves through air) based on that of an idealized spherical particle of a given diameter
- aerosol** a dispersed suspension of fine particles in a gas
- agonist** a drug that can bind to the cellular receptors for another drug or natural substance and produce a physiological effect typical of that drug or substance
- alanine transaminase** an enzyme involved in metabolism, elevated blood levels of which are an indicator of liver damage
- albino** an organism with deficient pigmentation in skin, eyes, and hair
- aldehyde** any organic compound containing the group $-CHO$, which yields acids when oxidized and alcohols when reduced
- aliphatic** pertaining to or denoting organic compounds in which carbon atoms form open chains
- alimentary tract** the digestive tract
- alkali-labile sites** locations where DNA damage results in single-strand breaks under alkaline conditions
- alkene** a chemical compound containing a carbon-carbon double bond and having the general formula C_nH_{2n} , where n is the number of atoms
- alkyd** a synthetic resin used in paints and mold castings
- alkylating agent** a compound that forms chemical bonds with DNA, interfering with DNA replication; some alkylating agents are used as anti-cancer drugs
- allele** any one of a series of two or more variants of a gene that occupy the same position (locus) on a chromosome
- alloy** a substance made by combining two or more metals or a metal and another material
- alpha 2u globulin (α_{2u} globulin) nephropathy** a mechanism of carcinogenicity associated with kidney tumors in male rats, but not females, and not considered relevant to carcinogenicity in humans
- alveolar** of or pertaining to the alveoli of the lungs
- alveoli** usually referring to small, sac-like pouches in the portion of the lungs where gas exchange with the blood occurs; also, sac-like structures in certain glands or in the jaws where the teeth arise
- alveolitis** inflammation of the alveoli
- ambient air** outdoor air to which the general public is exposed
- ameloblastoma** a tumor arising from cells that form tooth enamel
- amenorrhea** the absence or abnormal cessation of menstruation
- amine** an organic compound derived from ammonia (NH_3) by the replacement of one or more hydrogen atoms (H) by organic groups
- amino acid** one of a class of organic compounds that form the main constituents of protein
- amyloidosis** the accumulation in body tissues of amyloid, an abnormal material consisting of protein fibers and carbohydrate
- anabolic steroid** a synthetic derivative of the male hormone testosterone used to promote growth and repair of body tissues
- anaerobic** pertaining to biological processes that do not require oxygen or that take place only in the absence of oxygen
- analgesic** a pain-relieving agent that does not cause loss of consciousness
- analogue** a compound that resembles another compound in structure, but is not necessarily an isomer
- analyte** a substance whose chemical constituents are being identified and measured
- analytical grade** the highest available purity of a chemical
- anaplastic** (of cancer cells) dividing rapidly and having little or no resemblance to normal cells
- androgen** any steroid hormone that promotes masculine characteristics
- anemia** the condition of having fewer circulating red blood cells than normal
- anesthetic** a substance used to prevent the sensation of pain
- aneuploidy** the condition of having an abnormal number of chromosomes
- angiogenesis** the development of blood vessels
- angiosarcoma** a malignant tumor arising from the lining of a blood vessel
- anionic** pertaining to an ion that carries a negative charge
- anthropogenic** caused by humans
- antibiotic** a drug that kills or inhibits the growth of bacteria
- antibody** a protein produced by the immune system to detect and remove a foreign substance
- anticonvulsant** a drug that lessens the severity of convulsions
- antigen** a molecule capable of inducing an immune response by the host organism
- anthelmintic** a drug used to treat parasitic infestations caused by helminths (parasitic worms) (also called anthelmintic)
- antimicrobial** a substance that kills microbes (bacteria, fungi, and protozoa), stops their multiplication or growth, or otherwise prevents their pathogenic action
- antimitotic therapy** treatment of cancer by inhibition of mitosis (cell division)
- antineoplastic** inhibiting the survival and proliferation of tumors

antioxidant a substance that inhibits chemical oxidation of another material

antiseptic a substance that inhibits the growth of microorganisms on living tissue

antrum of the stomach the lower portion of the stomach (also called the pyloric antrum)

aplastic anemia a condition in which the body does not produce enough new blood cells

apoptosis programmed cell death, a normal process whereby cells die in response to biochemical signals from within the body

aquaculture the production of food by growing plants or animals in water

aqueous pertaining to, containing, or dissolved in water

aquifer an underground layer of water-bearing permeable rock, rock fractures, or unconsolidated materials (gravel, sand, or silt) from which groundwater can be extracted in a water well

archaea members of a domain or kingdom of single-celled microorganisms, formerly classified as bacteria, whose cells lack a nucleus but which have unique characteristics separating them from bacteria and eukaryotes

aromatic pertaining to cyclic flat organic molecules with unusual stability

aromatic amine an organic chemical compound consisting of an aromatic ring attached to an amine

aromatic hydrocarbon an organic chemical compound formed primarily from carbon and hydrogen atoms with a structure based on benzene rings

arsenical containing arsenic

arterial of or pertaining to arteries

arteritis inflammation of an artery

ascaricide a drug that treats roundworm infection

assay a procedure for measuring a property of a substance

astrocytoma a tumor of the brain or spinal cord originating in astrocytes, a type of glial cell

atomic weight the average mass of a given atom on a scale where 1 atomic mass unit equals 1/12 the average mass of a carbon atom

atrophic gastritis chronic inflammation of the stomach lining in which glandular cells are replaced by intestinal and fibrous tissues

auditory sebaceous gland a secretory gland in the inner layer of the skin of the ear

autoignition temperature the lowest temperature at which a substance will spontaneously ignite

autoimmune disease a condition in which the body is harmed by its own immune system (also called autoimmune disorder or autoimmunity)

autoimmune hemolytic anemia a blood disease in which the body produces antibodies that destroy its own red blood cells

azo pertaining to compounds containing the azo group $-N=N-$ as part of their structure

B

B cell a type of white blood cell that makes antibodies (also known as a B lymphocyte)

bacteria members of a kingdom or domain of single-celled microorganisms whose cells do not contain a nucleus

bactericide an agent that kills bacteria or inhibits their growth

bacteriophage a virus with specific affinity for bacteria

bacteriostat an agent that inhibits the growth of bacteria

bacteriostatic inhibiting the growth of bacteria

bacterium the singular form of "bacteria"

basal cells cells that line the deepest layer of the epidermis

bases in genetics, nitrogen-containing compounds that are components of DNA and RNA

benign tumor an abnormal mass of tissue that does not spread beyond normal tissue boundaries

beta-catenin (β -catenin) a protein involved in regulating cell-to-cell adhesion and gene transcription; mutations of the beta-catenin gene are associated with cancer

betel quid an addictive mix of betel leaf, areca nut, and slaked lime that is chewed in some Pacific and Asian cultures

bile a fluid produced in the liver and stored in the gallbladder that aids in digestion, especially of fats

bile duct a tube through which bile passes from the liver to the gallbladder or from the gallbladder to the small intestine

bilirubin a pigment produced by the breakdown of heme from red blood cells

bioaccessibility the fraction of the total amount of a substance that is potentially available for absorption into the bloodstream

bioaccumulation the process by which a material in the environment accumulates within an organism

bioassay a test to determine the potency or concentration of a substance by measuring its effect on animals, isolated tissues, or microorganisms

bioavailability the extent to which a substance is absorbed into the bloodstream following exposure or administration

bioconcentration accumulation of a chemical in the tissues of an organism (e.g., a fish) to concentrations greater than in the surrounding medium (e.g., water)

biodegradation breakdown of a substance by microorganisms

biomonitoring measurement of the amounts of toxic chemical compounds, elements, or their metabolites in the human body

biotransformation conversion of molecules from one form to another within an organism

bonded diamonds diamond particles embedded in a metal or resin binding matrix

bronchi the plural of "bronchus"

bronchiolar of or pertaining to the bronchioles

bronchiole a small division of a bronchus

bronchoalveolar of or pertaining to the bronchial tubes and the alveoli in the lungs

bronchoalveolar lavage a procedure in which saline solution is introduced into the terminal bronchioles of the lungs and then removed to obtain a sample of the cells, microorganisms, fluids, and particles present

bronchogenic carcinoma a malignant tumor originating in the bronchi of the lungs

bronchus one of the larger passages conveying air within the lungs

buccal of or pertaining to the cheek

buccal cavity the space within the mouth that lies between the teeth and the cheek

Burkitt lymphoma a form of non-Hodgkin lymphoma that originates in B cells (B lymphocytes)

C

C cell a type of cell of the thyroid gland that secretes calcitonin (also called parafollicular cells)

calcitonin a hormone that participates in regulation of calcium metabolism

cancer a general term used to indicate any of various types of malignant tumors

Report on Carcinogens, Fifteenth Edition

candidiasis an infection caused by the yeast-like fungus *Candida albicans*, most commonly involving the skin, mouth, respiratory tract, and vagina

capsid the protein outer shell of a virus

carbide a chemical compound consisting of carbon and a more electrically positive element

carbonization the process of converting an organic compound to carbon or to a residue derived from carbon

carcinogen any substance that causes cancer

carcinogenesis the process by which normal tissue becomes cancerous

carcinogenic having the power, ability, or tendency to cause cancer

carcinogenicity the power, ability, or tendency to cause cancer

carcinoid tumor a small, slow-growing benign or malignant neuroendocrine tumor found usually in the gastrointestinal tract

carcinoma a malignant tumor originating from epithelial tissue

carcinoma *in situ* a carcinoma that has remained in the place where it originated and has not spread to adjacent tissues

cardia of the stomach the uppermost part of the stomach

cardiac of or pertaining to the heart

cardiovascular of or pertaining to the heart and blood vessels

capillaries the smallest blood vessels, which form a network for the exchange of oxygen, metabolic waste products, and carbon dioxide between blood and tissue cells

carina a projection of the lowest tracheal cartilage where the airway divides into the right and left primary bronchi

cartilage a firm but flexible connective tissue that forms most of the embryonic skeleton and in adults is found in the larynx, respiratory tract, external ear, and joints

case-control study a study in which selected individuals with a specific diagnosis (cases) are compared with individuals without that diagnosis (controls) from the same population

case-comparison study a term previously used as a synonym for case-control study

case series a collection of patients with common characteristics, used to describe some aspect of a disease, treatment, exposure, or diagnostic procedure

catabolism the breakdown of complex molecules in living organisms to form simpler ones

catalysis the acceleration of a chemical reaction by a catalyst

catalyst a material that increases the rate of a chemical reaction while remaining unchanged at the end of the reaction

catalyze to increase the rate of a chemical reaction by functioning as a catalyst

cation an ion carrying a positive electrical charge

causalgia persistent pain resulting from injury to a peripheral nerve (also known as complex regional pain syndrome)

cecum the sac-like part of the large intestine between the small intestine and the colon

cell (in biology) the smallest structural and functional unit of a living organism, consisting of cytoplasm and a nucleus enclosed in a membrane

cellular (in biology) of, pertaining to, or consisting of cells

cemented carbide carbide particles embedded in a matrix of binding metal

central nervous system the part of the nervous system consisting of the brain and spinal cord

cerebral ependymoma a tumor originating from cells lining the central canal of the spinal cord or the ventricles of the brain

cerebrospinal fluid a watery fluid found in the brain and around the spinal cord

cervix a neck-like structure or constriction; most often used to refer to the neck of the uterus

cetane number an indicator of the combustion speed of diesel fuel (the diesel equivalent of octane)

characteristic hazardous waste a solid waste having the property of ignitability, corrosivity, reactivity, or toxicity, as defined under the Resource Conservation and Recovery Act

chelating agent a substance whose molecules can form several bonds to a single metal ion; can be used to remove an ion from participation in biological reactions and is often used to remove toxic metals from the body

chelation formation of a complex involving a metal ion and a chelating agent

Chemical Data Reporting Rule periodic reporting by manufacturers to the U.S. Environmental Protection Agency of exposure-related information on the types, quantities, and uses of chemical substances produced domestically and imported into the United States (formerly the Inventory Update Rule)

chemical intermediate a chemical formed or used during the process of producing another chemical

chemiluminescent immunoassay a technique in which antibodies are detected by labeling of the antigen or antibody with a molecule capable of emitting light during the chemical reaction between the antigen and antibody

chemosterilant a chemical compound that causes an organism to become sterile

chemotaxis movement of a cell or an organism toward or away from the source of a chemical stimulus (e.g., acidity)

chemotherapeutic related to the treatment of disease with chemical agents

chemotherapy treatment of disease with chemical agents

chiral (of a molecule) asymmetric in such a way that a structure and its mirror image cannot be superimposed

chlamydia a sexually transmitted infection caused by the bacterium *Chlamydia trachomatis*

cholango- (*prefix*) of or pertaining to the bile ducts

cholesteatoma of the nasal cavity a cyst resulting from the abnormal formation of keratin

choroidal melanoma a malignant tumor arising from melanocytes in the choroid (the middle, vascular layer of the eyeball)

chromatid one copy of a newly copied chromosome, still joined to the other copy

chromophobe adenoma a benign pituitary-gland tumor that does not secrete hormones

chromosomal aberration any abnormality in chromosome number or structure

chromosome a thread-like structure in the nucleus of a cell made of protein and DNA and containing genetic instructions encoded in genes

chronic continuing for a long period of time; in testing of rodents, refers to exposure schedules longer than three months

circulatory system the system involved in circulating blood and lymph throughout the body, consisting of the cardiovascular system (blood, blood vessels, and the heart) and the lymphatic system (lymph, lymphatic vessels, and lymph nodes)

cirrhosis of the liver a progressive disease in which normal liver tissue is replaced with scar tissue, impairing liver function

cis-activation activation of a gene by an activator DNA sequence located on the same chromosome as that gene

clade a group of genotypes that share a common ancestor

Report on Carcinogens, Fifteenth Edition

Clara cells secretory cells found in the epithelium of the terminal bronchioles

clastogen an agent with the ability to cause chromosome breaks

clastogenic able to cause chromosome breaks

clitoral glands in rodents, sebaceous glands of the folds of skin covering the clitoris, equivalent to the foreskin of the penis (also called the preputial glands of the clitoris)

coal tar a thick black liquid produced by distilling coal

cobalt–tungsten carbide hard metal a composite of tungsten carbide particles with a metallic cobalt powder as a binder, pressed into a compact, solid form at high temperatures (also called hard metal)

co-carcinogenicity enhancement of the activity of a carcinogen by another agent that is not itself carcinogenic

codon a sequence of three adjacent bases in a strand of DNA or RNA that codes for a specific amino acid

coenzyme a nonprotein compound that is necessary for the functioning of an enzyme

cofactor a contributory cause of a disease

cohort study a study that compares a group of people with a second group similar except with respect to one factor (usually the suspected cause of a disease)

colitis inflammation of the colon

colon the part of the large intestine extending from the cecum to the rectum

colorectal of or pertaining to the colon and rectum or to the entire large intestine

colposcopic examination the use of a special illuminated magnifying glass to examine the vulva, vagina, and cervix

commercial grade the degree of purity of a chemical produced for and adequate for commercial uses

condylomata acuminata genital warts, caused by certain subtypes of human papillomavirus

confidence interval a range of values defined so that there is a specified probability that the value of a parameter lies within it (usually 95%)

confounding factor a factor that obscures the relationship between a presumed cause and its presumed effect; the effect of the confounding factor cannot be logically separated from the effect(s) of other causal factor(s)

congener one of two or more chemicals related to each other by origin, structure, or function

congenital existing from birth

conjugated bound together; in organic chemistry, a molecular structure or substructure containing alternating double and single bonds between pairs of adjacent atoms

conjugation the process of becoming conjugated

conjunctiva the membrane that lines the eyelid and covers the front part of the eyeball

connective tissue structural tissue that connects, supports, or surrounds other tissues or organs

contaminant an impurity; in the environment, a chemical that is not ordinarily present and that may have deleterious effects on organisms

control group in a study, a group of subjects closely resembling the treatment group, but not receiving the treatment, and thereby serving as a comparison group against which to measure the effects of the treatment

controls in a study, members of a control group (also called control subjects)

copolymer a polymer consisting of two or more different monomers

core proteins (in viruses) proteins directly associated with the nucleic acid of viruses

corpus of the stomach the largest part (the body) of the stomach

cortex the outer layer of an organ

cortical of or pertaining to the cortex

corticosteroid a drug used to reduce inflammation

covalent binding formation of a chemical bond that involves the sharing of a pair of electrons between atoms

covalently through the formation of a covalent bond

creatinine a waste product of muscle metabolism, measured in blood and urine to assess kidney function

cross-linking 1. the extension of chemical bonds in more than one direction, which strengthens polymers 2. the reaction of an agent with two different positions in a DNA molecule or with both DNA and protein, to form an adduct

cryptococcosis an infection caused by inhaling the fungus *Cryptococcus neoformans*, which may spread from the lungs and infect the membrane surrounding the brain and spinal cord

cryptosporidiosis an intestinal infection caused by the parasite *Cryptosporidium parvum*

cytadenocarcinoma an adenocarcinoma that forms cysts

cytadenoma an adenoma that forms cysts

cytochrome a class of proteins containing the heme group, whose main function is electron transport

cytochrome P450 a group of enzymes involved in drug metabolism and found in high levels in the liver

cytogenetic of or pertaining to the cellular constituents involved in heredity

cytokine any of a number of hormone-like substances secreted by cells of the immune system that act nonenzymatically to regulate immune responses

cytomegalovirus a common herpesvirus that rarely causes symptoms but may cause serious disease in infants or in adults with weakened immune systems

cytopathogenic pertaining to an infectious agent that causes a diseased condition in cells, or to the effects of such an agent

cytoplasm the contents of a cell outside of the nucleus

cytosine one of the two pyrimidine bases in DNA; pairs with guanine

cytosol the fluid portion of the cytoplasm

cytosolic of or pertaining to cytosol

cytotoxic toxic to cells

cytotoxicity the ability to have toxic effects on cells

cytotoxic T cell a type of immune cell that kills cancerous, infected, or damaged cells

D

dam the female parent of a domestic animal

defoliant a chemical spray or dust that causes plants to lose their leaves prematurely

dehydrogenation the removal of one or more hydrogen ions or protons from a molecule

deliquescent tending to melt or dissolve; especially, tending to gradually dissolve and liquefy by attracting and absorbing moisture from the air

density amount of mass per unit volume; for solids and liquids, generally expressed in grams per cubic centimeter at room temperature; for gases, generally the calculated ideal gas density in grams per liter at 25°C and one standard atmosphere of pressure

dermal of or pertaining to the skin

dermatitis inflammation of the skin

dermatomyositis an inflammation of the skin, subcutaneous tissue, and muscles, involving death of muscle fibers

dermis the inner layer of the skin

diabetes a disorder of carbohydrate metabolism characterized by inadequate secretion or utilization of insulin, excessive urination, and excessive amounts of sugar in the blood and urine

diamine an organic compound containing two amine groups

diazo pertaining to a compound containing two linked nitrogen atoms as a terminal functional group

differentiated cells cells that have lost or have a limited capacity to transform into other cell types (in contrast to stem cells)

dimer a chemical structure formed from two similar subunits

dissociation constant (pK_a) a measure of the strength of an acid based on the equilibrium constant (K_a) for dissociation of a weak acid in a water solution

dissolution the act or process of dissolving

distant tumor a tumor located elsewhere than at the site where the abnormal growth originated

distillation separation or purification of the components of a material by gradually increased heating and removal of the components that vaporize at different boiling points

dominant lethal mutation assay an assay that identifies mutagens by measuring a chemical's ability to cause embryonic death due to chromosome breakage in parental germ cells

dorsal pertaining to the back or posterior of an organ or organism

dose-response relationship a relationship between the dose or concentration of a chemical, biological, or physical agent to which an organism is exposed and the degree of the monitored effect of that agent

duodenum the first section of the small intestine, extending from the stomach to the jejunum

dysplasia abnormal tissue growth or development

E

eczema an inflammation of the outer layer of skin, characterized by redness, itching, crusting, and scaling

edema abnormal accumulation of fluid in the spaces between the cells or in body cavities

effluent wastewater discharged from a treatment plant, sewer, or industrial outfall into the environment, usually to surface waters

effusion the escape of fluid from blood or lymph vessels into a body cavity

electrolyte a substance that dissociates into ions when melted or in solution, thereby becoming capable of conducting an electric current

electron a stable negatively charged particle that is a fundamental constituent of matter

electrophile the electron-attracting atom or agent in an organic reaction

electrophilic pertaining to an electrophile

emulsifier an agent that promotes the dispersion of an insoluble fluid into another fluid

enantiomer either of a pair of compounds whose molecular structures have a mirror-image relationship to one another

endemic constantly present in a community

endocrine of or pertaining to glands that secrete hormones directly into the circulatory system

endocytosis a process by which a cell transports molecules into the cell by engulfing them with the cell membrane

endogenous originating within an organism

endogenously derived or produced internally

endometrium the mucous-membrane lining of the uterus

end use the final intended purpose for an item or substance

enterohepatic pertaining to or involving the circulation of bile between the liver and the intestines; enterohepatic tissues include the intestinal tract, biliary tree, and liver

enveloped virus a virus that has an outer wrapping, or envelope

environmental fate the distribution and transformation of a chemical from its first release until its ultimate removal from or recycling through the environment

enzyme a protein that is capable of accelerating a particular biochemical reaction; a biological catalyst

enzyme-linked immunosorbent assay a technique for measuring the concentration of an antigen or antibody through a reaction that yields a colored product

eosinophilic granuloma complex a group of inflammatory skin lesions in cats

epidemiology the study of the occurrence and distribution of disease in populations

epidermis the outer layer of the skin

epidermoid tumor squamous-cell carcinoma (also called epidermoid carcinoma)

epididymis a coiled tube that stores sperm newly created by the testis

epigenetic pertaining to changes in gene expression or phenotype caused by mechanisms other than changes in the underlying DNA sequence

epilepsy a neurological disease usually characterized by seizures involving convulsions and loss of consciousness

epithelial of or pertaining to or consisting of epithelium

epithelium tissue that lines the body surface and cavities, consisting of cells joined by small amounts of cementing substances

epoxidized soybean oil a collection of organic compounds from soybean oil chemically converted for use as a plasticizer and stabilizer in polyvinyl chloride plastics

erythema redness of the skin produced by congestion of the capillaries

erythrocytes red blood cells

esophagus the passage through which food travels from the throat to the stomach

esthesioneuroepithelioma a nasal tumor consisting of cells of sensory-nerve epithelium (also called olfactory neuroblastoma)

estrogen any of a group of female sex hormones

estrus the recurrent, restricted period of sexual receptivity in female mammals other than humans

ethereal of, pertaining to, or containing ether

etiologic assigning or seeking to assign a cause

eukaryote an organism whose cells contain a nucleus and undergo mitosis; includes all organisms except bacteria and archaea

eukaryotic of or pertaining to a eukaryote

Ewing sarcoma a malignant tumor of the bone

exocrine of or pertaining to glands that secrete their products onto an epithelial surface via a duct

exogenous developed or originating outside of the body or biological system

extrahepatic located or originating outside of the liver

extranodal lymphoma any lymphoma originating outside of the lymph nodes

exposure-response relationship a relationship between the dose or concentration of a chemical, biological, or physical agent to which an organism is exposed and the degree of the monitored effect of that agent

F

Fanconi anemia a congenital disorder resulting in reduced numbers of red and white blood cells and platelets and associated with heart, kidney, and limb malformations, skin pigment changes, spontaneous chromosome breakage, and a predisposition to leukemia

feedstock the raw material supplied to a processing plant to create an end product

Fenton reaction the oxidation of iron(II) by hydrogen peroxide to form a hydroxyl radical

ferrous of, pertaining to, or containing iron

ferruginous body a mineral particle to which pulmonary macrophages have added an iron protein coat; used as an indicator of exposure to specific dusts or fibers

fiber a particle with a length-to-width ratio of at least 3:1

fibroadenoma a benign tumor formed of glandular and connective tissue

fibroblast the most common type of connective-tissue cell

fibroma a benign tumor originating in fibrous connective tissue

fibrosarcoma a malignant tumor originating in fibrous connective tissue

fibrosis thickening and scarring of connective tissue, usually as a result of injury

fining agent a chemical compound added to molten glass to remove bubbles

flagellum a thread-like appendage that enables certain bacteria and cells to swim

flash point the lowest temperature at which enough vapor of a combustible liquid forms to ignite momentarily in air

flocculant a substance that promotes the clumping of particles

flocculation the process by which fine particles in a liquid clump together

flux 1. the rate of mass flow across a unit area 2. chemical agent used as a cleaning, purifying, or flowing agent in smelting, welding, soldering, or brazing.

follicular cell a modified epithelial cell that secretes fluid

follicular dendritic cell a cell of the immune system that is found in lymphoid tissue and is able to trap antigens bound to antibodies

forestomach a non-glandular expansion of the alimentary canal between the esophagus and the glandular stomach, found in rodents, but not in humans

formalin a solution of formaldehyde in water typically containing 37% formaldehyde by mass and 10% to 15% methanol as a stabilizer

free radical an atom or molecule that has at least one unpaired electron and is therefore unstable and highly reactive (also called a radical)

frit a wholly or partially fused material used as a basis for glazes or enamels

fumigant a pesticide in vapor or gaseous form used to kill pests or disinfect materials

fungi the plural of "fungus"

fungicide a pesticide used to control, prevent, or kill fungi

fungus a lower plant that feeds on other organic matter and lacks the chlorophyll and tissue differentiation of higher plants

G

gallbladder a small organ where bile from the liver is stored before being released into the small intestine

gastric of or pertaining to the stomach

gastritis inflammation, irritation, or erosion of the lining of the stomach

gastrointestinal tract the part of the digestive system consisting of the stomach and intestines

gavage in studies with animals, the introduction of material through a tube passed through the mouth into the stomach (also called gastric, stomach, or oral intubation)

gene a unit of hereditary information; the portion of a DNA molecule that contains, coded in its nucleotide sequence, the information determining the sequence of a single chain of amino acids that make up a protein or part of a protein

genitourinary of or pertaining to the genital and urinary organs

genome the complete set of genes or genetic material present in a cell or organism

genomic of or pertaining to the genome

genomics the study of the structure, function, evolution, and mapping of genomes

genotoxic having the ability to damage a DNA molecule

genotoxicity the ability to damage a DNA molecule

genotype the genetic constitution of an individual organism

germ cells cells that give rise to sperm and eggs

gestation pregnancy; in mammals, the period from fertilization of the egg to birth

gestational trophoblastic tumor a rare tumor arising during pregnancy from cells that would normally develop into the placenta

gland an aggregation of cells specialized to secrete or excrete certain biologically important materials

glandular of or pertaining to a gland or glands

glandular stomach the muscular sac between the esophagus and the small intestine containing glandular tissue that secretes mucus, hydrochloric acid, and digestive enzymes

glass fiber a general term referring to reinforcing glass filament, glass wool, or superfine glass fiber

glass wool a fibrous product formed by blowing or spinning molten glass and collecting the resultant fibers as a tangled mat

glial cells cells that form the interstitial tissue of the brain, spinal cord, and retina (the light-sensitive layer of tissue at the back of the eyeball)

glioma any tumor derived from glial cells

glomerulonephritis any of several diseases characterized by injury to the part of the kidney that filters blood to form urine

glucagon a hormone secreted by the islet cells of the pancreas that works to raise the level of glucose in the bloodstream

glucagonoma a glucagon-secreting tumor of the islet cells of the pancreas

glutathione a compound that functions as a coenzyme in oxidation-reduction reactions in cells

glutathione S-transferase any member of a family of enzymes involved in reactions that play a key role in detoxification of many substances

gonadotropin any hormone that acts on the reproductive organs or system

gonorrhea a sexually transmitted disease caused by the bacterium *Neisseria gonorrhoeae* that if untreated can lead to severe pelvic infections and sterility

gram-negative bacteria bacteria that are not colored by the dye used in Gram staining because of the chemically complex structure of their cell walls

grand mal epilepsy a form of epilepsy characterized by seizures involving loss of consciousness and generalized convulsions

granulocytes white blood cells characterized by the presence of granules containing enzymes and forming part of the immune system

granulosa-cell tumor a slow-growing cancer originating in the cells that surround the eggs within the ovaries

guanine one of the two purine bases in DNA; pairs with cytosine

H

half-life the time required for the amount of a substance to be reduced to half its initial value through degradation or by elimination from an organism

halogen any of a class of five reactive nonmetallic chemical elements located in Group VIIA (Group 17) of the periodic table; they include fluorine, chlorine, bromine, iodine, and astatine.

halogenated denoting a chemical compound that includes a halogen

Harderian gland an accessory tear gland in all vertebrate animals that have a third eyelid (the nictitating membrane)

hard metal a composite of tungsten carbide particles with a metallic cobalt powder as a binder, pressed into a compact, solid form at high temperatures (also called cobalt–tungsten carbide hard metal)

hard palate the bony front portion of the partition separating the mouth from the nasal cavity

healthy-worker effect the phenomenon whereby workers usually have overall death rates lower than those of the general population, because the severely ill and disabled are generally excluded from employment

helicase an enzyme that acts to unwind the double-stranded helical structure of nucleic acids

hemangioendothelioma a tumor originating in cells derived from the blood vessels and lining irregular blood-filled spaces (when malignant, also called hemangiosarcoma)

hemangioma a benign tumor made up of newly formed blood vessels

hemangiosarcoma a malignant tumor originating in cells derived from the blood vessels and lining irregular blood-filled spaces

hematocrit the percentage of red blood cells in whole blood, by volume

hematopoietic pertaining to the formation of blood or blood cells

heme an iron compound that makes up the pigment portion of hemoglobin and is responsible for its oxygen-carrying properties

hemodialysis a medical procedure to remove waste products from the blood of a person with kidney failure (also called kidney dialysis)

hemoglobin the respiratory protein of red blood cells that transports oxygen from the lungs to the tissues and gives blood its red color

hemolymphoreticular of or pertaining to the network of cells and tissues of the blood and lymph nodes found throughout the body

hemolytic anemia a disease characterized by the abnormal breakdown of red blood cells

Henry's law the relationship that defines the partition of a soluble or partially soluble chemical between its gas and solution phases

Henry's law constant the ratio of the concentration of a chemical in solution to its equilibrium partial pressure in the gas phase; increases with decreasing solubility

hepatectomized having had the liver removed

hepatic of or pertaining to the liver

hepatitis an inflammation of the liver

hepatoblastoma a malignant liver tumor occurring in young children, consisting of embryonic tissue

hepatocellular of or pertaining to cells of the liver

hepatocellular carcinoma a malignant liver-cell tumor

hepatocyte a parenchymal liver cell

hepatotoxic a substance that is toxic to the liver

herbicide a substance that is toxic to plants, used to destroy unwanted vegetation

high-production-volume chemical as defined by the U.S. Environmental Protection Agency, any chemical produced in or imported into the United States in a quantity of 1 million pounds or more per year

high-throughput screening the use of automated methods to screen many chemicals at once for indicators of toxicity

histiocytic necrotizing lymphadenitis a benign and self-limiting disorder characterized by swollen lymph glands in the neck, with flu-like symptoms

histiocytoma a benign skin tumor originating in cells of the reticuloendothelial system

histological pertaining to the study of the microscopic structure of animal and plant tissues

histology the study of the microscopic structure, composition, and function of tissues

histones proteins found in the nuclei of cells that help package DNA into chromosomes

histoplasmosis a respiratory infection caused by inhaling the spores of the fungus *Histoplasma capsulatum*

Hodgkin disease a form of malignant lymphoma characterized by painless progressive enlargement of the lymph nodes, spleen, and general lymphoid tissue (also called Hodgkin lymphoma)

hormone any of various chemical substances produced by the endocrine glands and that have specific regulatory effects on the activity of certain organs

host antigen a molecule that is capable of inducing an immune response by the same organism that produced the molecule (i.e., an autoimmune response)

hyaline vascular Castleman disease a form of Castleman disease characterized by increased numbers of vessels in the lymph nodes and damage to the vessels

hydrofluorocarbon any of several simple gaseous compounds that contain carbon, fluorine, and hydrogen

hydrolysis breaking apart of a chemical compound through reaction with water

hydrolyze to subject to hydrolysis

hydroxyl group the atom group –OH

hydroxyl radical the highly reactive neutral form of the hydroxide ion (OH⁻)

hydroxylation introduction of a hydroxyl group into an organic chemical compound

hypermethylation an increased level of methylation

hyperplasia abnormal proliferation of normal cells in normal arrangement in a tissue

hyperthyroidism excessive activity of the thyroid gland

hypertrophy an increase in the volume of a tissue or organ produced entirely by the enlargement of existing cells

hypnotic sleep-inducing; a drug that induces sleep

hypogonadism decreased functional activity of the testes or ovaries, resulting in retardation of growth and sexual development

hypoxia a condition in which the body tissues do not receive enough oxygen

hypoxia-inducible factor a transcription factor that responds to decreased levels of oxygen available in a cell by activating genes to produce proteins that increase oxygen delivery or help the organism adapt to low oxygen levels

I

iatrogenic of or pertaining to illness caused by medical examination or treatment

Report on Carcinogens, Fifteenth Edition

icosahedral having 20 equilateral triangular surfaces, 12 corners, and 30 edges

ileum the lowest section of the small intestine, between the jejunum and the large intestine

immortalize to enable cells to continue to proliferate indefinitely

immune response the mechanisms by which the body recognizes and defends against pathogens and foreign substances

immune surveillance patrolling of the body by the immune system to detect and destroy invading pathogens, and possibly host cells that become cancerous

immune system the system of biological structures and processes within an organism that protects against disease

immunoassay a procedure for detecting or measuring specific proteins or other substances through their properties as antigens or antibodies

immunoblotting an assay that uses antibodies to detect individual proteins in a protein mixture (also called western blotting)

immunodeficiency weakening or absence of the immune response due to reduced activity or decreased numbers of lymphoid cells

immunodominant pertaining to the part of an antigen that is most easily recognized by the immune system and thus most influences the specificity of the induced antibody

immunofluorescence assay a technique that uses a fluorescent dye to detect the presence of specific antibodies in blood serum

immunogenic pertaining to a substance with the ability to cause an immune response

immunoglobulin any member of a class of proteins produced by lymphocytes that function as antibodies, recognizing, attaching to, and helping to destroy foreign substances

immunomodulator a chemical agent that alters the immune response or the functioning of the immune system

immunosuppression artificial prevention or reduction of the natural immune response, also used to describe the condition of acquired or congenitally lowered immune response

implantation insertion of a mass of material into an organism at a fixed site from which the mass does not move except by dissolving in the body fluids

incidence the rate at which new cases of a disease occur

inhalation drawing of air or other substances into the lungs

inhalation reference concentration as defined by the U.S. Environmental Protection Agency, the concentration of a chemical that one can breathe every day for a lifetime that is not anticipated to cause harmful non-cancer health effects

inhalation unit risk as defined by the U.S. Environmental Protection Agency, an estimate of the increased cancer risk from inhalation exposure to a concentration of 1 µg per cubic meter for a lifetime

initiation permanent alteration of a cell or group of cells, resulting in formation of tumors if the cells divide

initiator a chemical that permanently alters a cell or group of cells, resulting in formation of tumors if the cells divide

injection site the site, usually in the skin, at which a substance is injected into an organism

inorganic pertaining to materials or chemicals that do not contain carbon

in situ confined to the site of origin; “carcinoma *in situ*” refers to noninvasive cancer

in situ hybridization a technique to identify a specific DNA or RNA sequence in a portion or section of tissue by using a labeled complementary nucleic acid strand.

insoluble incapable of being dissolved in a particular solvent

insulin a hormone secreted by the islet cells of the pancreas that promotes the absorption of glucose from the bloodstream into muscles and fat tissue

insulinoma a usually benign insulin-secreting tumor of the islet cells of the pancreas

integrase an enzyme produced by a retrovirus that enables its genetic material to be integrated into the DNA of the infected cell

interferon a protein released by cells, usually in response to the entry of a virus, that has the ability to inhibit viral replication

International Organization for Standardization a nongovernmental organization made up of representatives from national standards bodies that serves as an international standard-setting body

interstitial pertaining to or situated in the spaces between tissues or the parts of an organ

intra-abdominal within the abdomen

intra-bronchial within a bronchus

intracellular located or occurring within a cell or cells

intramedullary injection injection into the bone marrow

intramuscular injection injection into muscle tissue

intra-peritoneal injection injection into the peritoneal cavity

intrapleural injection injection within the pleura

intrathoracic implantation implantation within the thoracic cavity (the area that contains the heart and lungs)

intratracheal instillation introduction directly into the trachea (also called intratracheal administration or injection)

intravaginal within the vagina

intravenous injection injection into a vein

intravesicular instillation introduction directly into the urinary bladder (also called intravesicular administration or injection)

in utero within the uterus

invasive spreading beyond the body tissue of origin

Inventory Update Rule the former name of the Chemical Data Reporting Rule

in vitro pertaining to a biological process taking place in a test tube, culture dish, or elsewhere outside a living organism

in vivo pertaining to a biological process taking place in a living organism

ion an atom or molecule that has a net positive or negative electric charge as a result of losing or gaining one or more electrons, and thus has unequal numbers of protons and electrons

ion channel a protein that acts as a pore in a cell membrane and permits the selective passage of ions into the cell

ionizing (*adjective*) having the ability to convert an atom or molecule into an ion or ions, typically by removing one or more electrons

iron-deficiency anemia a disease characterized by low or absent stores of iron in the body and low concentrations of iron in the blood

islet cells secretory cells found in the endocrine portion of the pancreas

isomer one of two or more forms of a chemical that have the same chemical formula but different structural arrangements

isotope one of two or more forms of the same chemical element that contain different numbers of neutrons

isozyme any of the chemically distinct forms of an enzyme that perform the same biochemical function

J

jaundice a yellowish staining of the skin, whites of the eyes, and deeper tissues caused by an excess of bilirubin in the blood

jejunum the middle section of the small intestine, between the duodenum and ileum

K

Kaposi sarcoma a malignant tumor occurring in the skin, in the lining of the mouth, nose, or throat, or in other organs caused by infection with Kaposi sarcoma herpesvirus (human herpesvirus type 8)

keratin a fibrous protein that is the key structural component of the outer layers of the skin, hair, and nails

keratinizing squamous-cell carcinoma squamous-cell tumors containing keratin in the cytoplasm

keratoacanthoma a benign skin tumor closely resembling squamous-cell carcinoma and having a central keratin mass

koilocyte a squamous epithelial cell that has undergone structural changes as a result of infection with human papillomavirus

koilocytosis the presence of koilocytes in a biological specimen

K_{ow} the octanol-water partition coefficient, representing the ratio of the solubility of a compound in octanol (a nonpolar solvent) to its solubility in water (a polar solvent)

L

lactation the secretion of milk

lactic acidosis a metabolic disorder in which excessive levels of lactic acid occur in the blood

laminating uniting superimposed layers of a material or materials

laryngeal of or pertaining to the larynx

larynx a passage located between the pharynx and the trachea, containing the vocal cords (also called the voice box)

latency 1. the time between exposure to a carcinogen and the onset of cancer 2. the part of the viral life cycle when the virus lies dormant and does not reproduce itself or cause disease symptoms

latent virus a virus that remains in the host organism without undergoing replication

leachate the liquid produced from the decomposition of waste in a landfill

leiomyoma a benign tumor derived from smooth muscle

leiomyosarcoma a malignant tumor derived from smooth muscle

leukemia a cancer of the blood-forming tissues (the bone marrow and the lymphatic system) characterized by a marked increase in the number of abnormal white blood cells (leukocytes) in the bone marrow and peripheral blood

leukocyte a white blood cell (lymphocyte, granulocyte, or monocyte)

Leydig cell a cell in the testes that secretes the hormone testosterone

lipid any of the naturally occurring fats or waxes

lipophilic tending to combine with or dissolve in lipids

lipophilicity the ability of a chemical compound to combine with or dissolve in lipids

liposomal of or pertaining to an artificially prepared spherical vesicle composed of a lipid bilayer that can be used as a vehicle for administration of nutrients or drugs

listed hazardous waste a solid waste from common manufacturing and industrial processes that is listed as hazardous under the Resource Conservation and Recovery Act

locus in genetics, the specific location of a gene on a chromosome

log octanol-water partition coefficient (log K_{ow}) the logarithm of the octanol-water partition coefficient (K_{ow}); used as a relative indicator of the tendency of an organic compound to adsorb to soil

loss of heterozygosity loss of the normal allele at a gene locus with one normal and one abnormal allele

lupus a chronic inflammatory disease caused by autoimmunity

lymph a clear liquid collected from tissues throughout the body and returned to the blood via the lymphatic system

lymphatic of or pertaining to the lymph and lymph nodes and vessels

lymphoblast an immature lymphocyte

lymphocyte a mononuclear, nongranular white blood cell that is produced primarily by lymphoid tissue and participates in the immune response

lymphocytic leukemia leukemia involving immature white blood cells (lymphoblasts), usually of B-cell origin (also called lymphoblastic or lymphoid leukemia)

lymphohematopoietic pertaining to or involved in the production of lymphocytes and cells of blood, bone marrow, spleen, lymph nodes, and thymus

lymphoid of or pertaining to the organs and tissues of the lymphatic system

lymphoma any malignant tumor originating in lymphoid tissue

lymphopoietic pertaining to the formation of lymph

lymphoreticular of or pertaining to the cells or tissues of both the lymphatic and reticuloendothelial systems

lymphosarcoma a diffuse lymphoma

lysosomal of or pertaining to lysosomes

lysosome an organelle in eukaryotic cells that contains digestive enzymes that break down food particles, worn-out organelles, and bacteria and viruses

lytic virus a virus that uses the cellular machinery of the host organism to replicate itself and kill the host cell, releasing a new generation of viruses

M

macroalga an alga large enough to be visible to the naked eye

macrophage a type of white blood cell that engulfs and digests debris and foreign particles

malignant tending to become progressively worse; life-threatening

mammal any of a class of warm-blooded higher vertebrates that nourish their young with milk secreted by mammary glands; includes humans

mammalian of or pertaining to mammals

mammary of or pertaining to the breast

mastodynia pain in the breast

medullary of or pertaining to the inner core of certain organs or body structures

megakaryocyte a large cell of the bone marrow that gives rise to platelets

melanin the pigment that gives skin, hair, and eyes their color

melanocytic pertaining to cells that produce the pigment melanin

melanoma any tumor consisting of melanin-pigmented cells

melanotic characterized by the presence of melanin

meningioma a slow-growing tumor of the meninges (the membrane covering the brain and spinal cord)

mesenchymal of or pertaining to the embryonic tissue that gives rise to connective tissue, blood cells, blood vessels, lymphatic cells, and reticuloendothelial cells

mesentery a membranous fold attaching various organs to the body wall

mesothelioma a tumor of the lining of the chest or abdomen

meta-analysis pooled statistical analysis of several similar studies

metabolism the range of biochemical processes that occur within living organisms, including both the buildup and breakdown of substances

metabolite a substance produced through metabolism

metaplasia the change of a mature cell in a given tissue to a cell type that does not normally occur in that tissue

meta-relative risk the relative risk calculated in a meta-analysis

Report on Carcinogens, Fifteenth Edition

metastasis the transfer of cancer cells from their site of origin to another part of the body not connected with the site of origin

methemoglobin a form of hemoglobin that cannot carry oxygen, as the result of oxidation of the iron atom

methemoglobinemia the presence of an abnormally large amount of methemoglobin

methylation addition of a methyl group ($-CH_3$) to a molecule

microbe a microorganism (bacterium, fungus, or protozoan)

microbial of or pertaining to microbes

microglioma a tumor originating from microglial cells (small cells forming part of the structure of the central nervous system)

microinvasive denoting a carcinoma *in situ* that invades adjacent tissues at the microscopic level

micronuclei the plural of “micronucleus”

micronucleus a nucleus separate from, and additional to, the main nucleus of a cell, produced during cell division by lagging chromosomes or chromosome fragments

microRNA a small, non-coding RNA molecule that prevents production of a particular protein by binding to and destroying the messenger RNA from which the protein would have been produced

microsomal of or pertaining to microsomes

microsomes vesicle-like fragments of endoplasmic reticulum formed from eukaryotic cells disrupted in the laboratory, containing cytochrome P450 and used to mimic mammalian metabolism *in vitro*

mineral wool generic name for fiber materials formed by spinning or drawing molten or synthetic minerals

miscible capable of being mixed without separation into distinct components

mitochondria organelles that occur in the cytoplasm of eukaryotic cells, containing genetic material and enzymes important for cell metabolism, including those that convert food to energy

mitogen a substance that induces mitosis

mitosis in cell division, the separation of duplicated chromosomes into two genetically identical daughter nuclei

mitotic pertaining to mitosis

molecular pathway a series of actions among molecules in a cell that leads to a certain cell product or function

molecular weight the sum of the atomic weights of all the atoms in a molecule

molecule an electrically neutral group of two or more atoms held together by chemical bonds

monoclinic denoting a crystal having three axes of unequal length, with two perpendicular intersections and one oblique intersection

monoclonal derived from a single ancestral cell

monocytes mononuclear phagocytic white blood cells

monomer a chemical subunit that is joined to other similar subunits so as to produce a polymer

mononuclear having one nucleus

mononuclear-cell leukemia a type of lymphocytic anemia common in rats, but rarely seen in humans (also called large-cell granular lymphocytic leukemia)

mononucleosis a disease characterized by excess monocytes in the blood, with flu-like symptoms

monovalent an atom, ion, or chemical group having a valence of 1

mucosa a membrane that lines body cavities and the surfaces of internal organs (also called mucous membrane)

mucosal of or pertaining to the mucosa

mucous containing, producing, or secreting mucus

multi-flagellated denoting bacteria that have more than one flagellum

multiple myeloma malignant tumors originating from mature lymphocytes in the bone marrow

mutagen any agent with the ability to cause mutations

mutagenicity the ability to cause mutations

mutation a permanent, transmissible change in genetic material

myasthenia gravis a neurological disorder causing muscular weakness and fatigue

mycobacterium avium complex an infection caused by two similar bacteria, *Mycobacterium avium* and *M. intercellulare*, occurring in people with compromised immune systems

mycosis fungoides a chronic malignant T-cell lymphoma of the skin

myelocytic leukemia leukemia arising from non-lymphocyte white blood cells in the bone marrow

myelodysplastic syndromes a group of disorders in which bone marrow does not produce enough mature blood cells (also called bone marrow failure disorder)

myelogenous leukemia leukemia involving immature red blood cells, granulocytes, monocytes, or platelets (also called myeloid leukemia or nonlymphocytic leukemia)

myeloid pertaining to, derived from, or resembling bone marrow

myeloma a tumor derived from B cells in the blood marrow

myelomonocytic leukemia leukemia involving monocytes and myeloblasts (immature granular leucocytes)

N

nanofiber a fiber with a diameter of less than 100 nanometers (less than one tenth of a micrometer)

nanoparticle a particle with a diameter of less than 100 nanometers (less than one tenth of a micrometer)

nanowire an electrical wire with a diameter of less than 100 nanometers (less than one tenth of a micrometer) and typically with a length more than 1,000 times its diameter

nasal cavity the air-filled space above and behind the nose

nasal turbinates thin, scrolled bony plates that project from the walls of the nasal cavity (also called nasal conchae or nasoturbinates)

nasopharyngeal of or pertaining to the nasopharynx

nasopharynx the upper part of the pharynx, behind the nasal cavity and above the soft palate

National Health and Nutrition Examination Survey (NHANES) a survey conducted by the Centers for Disease Control and Prevention on an ongoing basis and consisting of interviews, physical examinations, and laboratory measurements. Each year, NHANES examines a sample of about 5,000 people selected to represent all age groups in the U.S. population. The survey findings aid in determining the prevalence of major diseases and the risk factors for those diseases.

National Priorities List a list of hazardous waste sites eligible for long-term remedial action financed under the U.S. EPA Superfund program

natural killer cell a type of white blood cell that has the ability to destroy tumor cells or virus-infected cells without relying on memory of exposure to a specific pathogen

necrosis the death of tissue due to disease, injury, or failure of blood supply

negative control in an experiment, a group that has not received the experimental treatment and from which no response is expected

neonatal pertaining to or affecting the first four weeks after birth

neoplasia the abnormal proliferation of cells (tumor formation)

neoplasm a new growth resulting from abnormal proliferation of cells; a tumor

neoplastic pertaining to neoplasia (tumor formation)

nephroblastoma a rapidly developing malignant tumor of the kidney (also known as Wilms tumor)

nephrotic syndrome a kidney disorder characterized by swelling, excessive proteins in the urine, and elevated susceptibility to infections

nested case-control study a case-control study conducted within a cohort study, in which cases of a disease that occur within the cohort are identified, and the case subjects are compared with members of the cohort who have not developed the disease, who serve as control subjects

neural of or pertaining to the nerves

neuroblastoma a malignant tumor of the nervous system consisting chiefly of immature cells

neuroendocrine pertaining to or involving both the nervous system and endocrine secretion

neurogenic originating in or forming nervous tissue

neutron an elementary particle of matter that is electrically neutral and is found in the nucleus of all atoms except hydrogen

nodule a swelling or protuberance

nodular resembling or consisting of nodules

non-Hodgkin lymphoma a heterogeneous group of malignant lymphomas

nonhomologous recombination during the process of DNA repair, joining of chromosome fragments that do not contain corresponding DNA

nonpolar pertaining to molecules that have a symmetric distribution of charge, with no positive or negative poles, and that do not ionize in solution

nonoxynol 9 a spermicide widely used in contraceptive preparations

nuclei the plural of “nucleus”

nucleic acids large molecules, composed of nucleotides, that store and transmit genetic information; DNA and RNA

nucleocapsid the capsid of a virus with its enclosed nucleic acid

nucleoside a compound that consists of a purine or pyrimidine base linked to a sugar and found especially in DNA or RNA

nucleotide triphosphatase an enzyme required for viral replication

nucleotides the molecular subunits of nucleic acids, consisting of a purine or pyrimidine base, a sugar, and phosphoric acid

nucleus a membrane-enclosed structure present in most eukaryotic cells, containing most of the cell’s genetic material

O

oat-cell carcinoma a type of lung cancer (also called small-cell carcinoma or small-cell bronchogenic carcinoma)

octanol-water partition coefficient (K_{ow}) the ratio of the solubility of a compound in octanol (a nonpolar solvent) to its solubility in water (a polar solvent)

odds ratio a ratio of the odds of an event in one group to the odds of the same event in another group; an odds ratio of 1 indicates that the event is equally likely in both groups

odontoameloblastoma a rare benign mixed tumor that is part ameloblastoma and part odontoma

odontoma a benign tumor of the tissue that gives rise to teeth

offgassing the release of gaseous chemicals from a solid material

olefinic denoting any of a class of unsaturated open-chain hydrocarbons having at least one double bond

olfactory nerves the nerves associated with the sense of smell

oligodendrogloma a tumor derived from glial cells that support and insulate nerve fibers in the central nervous system

oncogene a gene that contributes to the development of cancer; also used to refer to proto-oncogenes

oncogenic having the ability to cause cancer

oncogenicity the ability to cause cancer

opioid 1. (*noun*) any synthetic narcotic drug that binds to the same receptors in nerve cells as the naturally occurring alkaloids found in the opium poppy 2. (*adjective*) of or pertaining to the receptors for such substances

oral administration administration of a drug or test substance by mouth

oral cancer slope factor as defined by the U.S. Environmental Protection Agency, an estimate of the increased cancer risk from oral exposure to a dose of 1 mg/kg of body weight per day for a lifetime

oral cavity the space within the mouth

oral reference dose as defined by the U.S. Environmental Protection Agency, the amount of a chemical that one can ingest every day for a lifetime that is not anticipated to cause harmful non-cancer health effects

organelle a structure that is enclosed within its own membrane inside a eukaryotic cell and has a particular function

organic pertaining to the chemistry of carbon compounds

oropharynx the soft palate, tonsils, and back of the tongue and throat

osteogenic sarcoma a malignant bone tumor occurring most commonly in large bones and in areas of rapid bone growth

osteoporosis an abnormal loss of bone density

ovary one of the pair of female reproductive organs in which eggs are formed

ovulation the release of an egg from an ovary

oxidant an oxidizing agent

oxidase an enzyme that catalyzes oxidation reactions with molecular oxygen participating as the electron acceptor (also called oxidoreductase)

oxidation state a positive or negative number representing the number of electrons gained or lost by an element or ion in the reaction forming a particular chemical compound (also called oxidation number)

oxidation-reduction reaction a chemical reaction involving a transfer of electrons or hydrogen between two substances, whereby one substance is oxidized and the other is reduced (also called a redox reaction)

oxidative stress an imbalance between the production of reactive oxygen species and the ability of the body to detoxify them or counteract their effects

oxidize 1. (*transitive verb*) to remove one or more electrons from an atom, ion, or molecule 2. (*intransitive verb*) to become oxidized

oxidizer an oxidizing agent

oxidizing agent a chemical substance that accepts an electron from another substance in an oxidation-reduction reaction

oxidoreductases enzymes that catalyze oxidation-reduction reactions (also called oxidases)

P

palate the partition separating the nasal and oral cavities

pancreas a large gland behind the stomach that secretes both hormones and enzymes involved in digestion and metabolism

pancreatic of or pertaining to the pancreas

papillary of or pertaining to a small, round, raised structure on a part or organ of the body

papilloma a benign tumor derived from epithelium that can arise from skin, mucous membranes, or glandular ducts and that projects from the surrounding surface

paracrine denoting a hormone secreted by a cell and diffusing a short distance to act on adjacent cells

Report on Carcinogens, Fifteenth Edition

- paraformaldehyde** a polymer of formaldehyde
- paranasal sinuses** four pairs of air-filled cavities surrounding the nasal cavity
- parathyroid gland** any of four small glands located beside the thyroid gland
- parenchyma** the functional cells of a gland or organ, as distinguished from its supporting tissue (the stroma)
- parenchymal** of or pertaining to the parenchyma
- parenteral** pertaining to administration of a substance by any route other than the alimentary canal
- pars distalis** the major portion of the anterior lobe of the pituitary gland
- particulate** pertaining to matter in the form of minute separate particles
- pathogen** any infectious agent
- pathogenesis** the process by which an agent causes disease
- pathogenic** having the ability to cause disease
- pathogenicity** the ability to cause disease
- pathologist** an expert in the study of disease
- pathology** the study of the nature of diseases
- pelvis** 1. the lower portion of the trunk of the body, between the hipbones 2. the renal pelvis
- pemphigus diseases** a group of chronic, relapsing autoimmune skin diseases that cause blisters or sores of the skin and mucous membranes
- perched aquifer** an aquifer that has a confining layer below the groundwater and sits above the main water table
- perinatal** pertaining to or occurring during the period closely surrounding the time of birth
- peripheral** away or farther from the center
- peripheral blood** blood circulating throughout the body
- peripheral nervous system** the part of the nervous system outside of the brain and spinal cord
- peritoneal cavity** the space within the abdomen that contains the intestines, stomach, and liver
- peritoneum** the lining surrounding the abdominal cavity and containing the internal organs in the trunk of the body
- permissible exposure limit** as defined by the Occupational Safety and Health Administration, the 8-hour time-weighted-average level of an air contaminant to which an employee may be exposed during any 8-hour shift of a 40-hour work week
- peroxidized fats** fats that have been damaged by oxygen free radicals, forming reactive aldehydes
- peroxisome** a cell organelle containing oxidative enzymes and performing essential metabolic functions
- pesticide** an agent intended to destroy a pest organism
- pH** a numeric scale of acidity and alkalinity, ranging from 0 to 14, where pH of less than 7 indicates acidity, pH of 7 indicates neutrality, and pH of more than 7 indicates alkalinity
- phagocytic** pertaining to phagocytosis or the cells responsible for phagocytosis
- phagocytize** (of a cell) to engulf and digest a solid substance
- phagocytosis** the process by which cells engulf and digest solid substances
- pharmacokinetic** pertaining to the fate of drugs within biological systems, including their absorption, distribution, metabolism, and elimination
- pharyngeal** of or pertaining to the pharynx
- pharynx** the passageway connecting the oral and nasal cavities to the larynx and esophagus
- phenolic** denoting a chemical compound consisting of a hydroxyl group (–OH) bonded directly to an aromatic hydrocarbon group
- phenotype** in genetics, a category or group to which an individual may be assigned on the basis of one or more observable characteristics that reflect genetic variation or interaction between the genes and the environment
- pheochromocytoma** a tumor derived from cells of the adrenal medulla
- phlebotomy** the practice of drawing blood from patients
- photodecomposition** photolysis
- photolysis** a chemical reaction in which a compound is broken down by light (also called photodecomposition or photodissociation)
- photosensitizer** a substance that causes an organism, cell, or tissue to become sensitive to light
- pituitary gland** an endocrine gland at the base of the brain that secretes several important hormones
- placenta** the organ in most mammals that connects the fetus with the mother's uterus
- plasma** (of blood) the fluid portion of blood, excluding the blood cells
- plasmablasts** immune cells that are immature precursors of antibody-producing B lymphocytes
- platelet** a component of blood derived from bone-marrow cells that has a major role in clotting
- pleomorphic** able to assume different forms
- pleura** the secretory membrane surrounding the lungs and lining the chest cavity
- pneumocystis pneumonia** an infection caused by the fungus *Pneumocystis jiroveci*, resulting in inflammation and fluid buildup in the lungs
- pneumonitis** inflammation of lung tissue
- polar** pertaining to molecules that have an asymmetric distribution of charge, with positive and negative poles, and that ionize in solution
- polycythemia vera** a disease characterized by abnormal proliferation of all bone-marrow elements involved in blood formation, resulting in increased blood cell mass and total blood volume
- polymer** a chemical formed by the joining together of similar chemical subunits
- polymerase chain reaction** a technique used to make multiple copies of a segment of DNA
- polymerization** the chemical reaction by which a polymer is formed
- polymorphism** in the population of a species, the existence of two or more alleles of a gene that are too common to be due only to new mutations
- polyp** a new growth protruding from a mucous membrane
- polypoid** resembling a polyp
- polyprotein** a large protein that is cleaved into separate smaller proteins with different biological functions
- positive control** in an experiment, an agent known to have the effect being tested for, used to verify that the experiment is functioning correctly
- postpartum** occurring after childbirth
- posttransplant lymphoproliferative disease** a complication of organ transplantation characterized by proliferation of B lymphocytes, resulting from immunosuppression used to prevent organ rejection
- preeclampsia** a potentially fatal complication of pregnancy related to insufficient blood supply to the placenta and characterized by high blood pressure
- prenatal** existing or occurring before birth
- preputial glands** sebaceous glands of the foreskin of the penis
- prevalence** the number or proportion of cases of a disease present in a particular population at a given time

primary biliary cirrhosis a disease in which the bile ducts of the liver are slowly destroyed, resulting in liver damage

primary cancer cancer occurring at the tissue site where it originally developed

primate any member of an order of mammals that includes humans, apes, and monkeys

prokaryote a single-celled microorganism that lacks a nucleus or any other membrane-bound organelles such as mitochondria; its genome consists of a single large molecule of DNA, and it does not undergo mitosis during replication; prokaryotes consist of bacteria and archaea

prokaryotic of or pertaining to prokaryotes

promoter 1. a substance that is not itself carcinogenic but that amplifies carcinogenic effects of other substances (a tumor promoter)
2. a region of DNA that initiates gene transcription

promyelocytic leukemia leukemia involving predominantly granulocyte precursor cells

prophylactic (*adjective*) guarding from or preventing the spread of disease

prospective study a cohort study that follows over time a group of otherwise similar individuals who differ with respect to the factors under study, to determine how these factors affect the rates of a particular outcome

prostate a gland in males that surrounds the neck of the urinary bladder and the urethra and secretes a fluid component of semen

protease an enzyme that breaks proteins down into their component parts

proteomics the large-scale study of the functions, structures, and interactions of proteins, particularly the complete complement of proteins of a biological system

proton a stable positively charged particle that is a fundamental constituent of matter

proto-oncogene a normal gene that when altered by mutation becomes an oncogene

protozoan any of a large group of single-celled eukaryotic organisms that live in water or as parasites

provirus a form of a virus that is integrated into the genetic material of a host cell and can be replicated with and transmitted from one cell generation to the next without destroying the cell

proximal tubule the first part of a tubule that makes up a functional unit of the kidney

psoriasis a chronic hereditary skin disease characterized by thick red patches covered with silvery scales

pulmonary of or pertaining to the lungs

purine a type of nitrogen-containing base that is a component of DNA and RNA; adenine or guanine

pyrimidine a type of nitrogen-containing base that is a component of DNA and RNA; cytosine or thymine

pyrolysis decomposition of a substance by heat in the absence of air

R

radical (in chemistry) an atom or molecule that has at least one unpaired electron and is therefore unstable and highly reactive (also called a free radical)

radioactive emitting or pertaining to the emission of ionizing radiation or particles from an atomic nucleus

radiotherapy treatment of disease with ionizing radiation, especially to kill malignant cells

rapid urease testing a test used in conjunction with biopsy of stomach-lining cells to quickly detect the presence of *Helicobacter pylori*

reactive oxygen species a chemically reactive molecule or free radical containing oxygen

recommended exposure limit an exposure limit that the National Institute for Occupational Safety and Health believes would be protective of worker safety and health over a working lifetime if used in combination with engineering and work practice controls, exposure and medical monitoring, posting and labeling of hazards, worker training, and personal protective equipment

regional screening level as defined by the U.S. Environmental Protection Agency, a concentration of an environmental contaminant, based on information on exposure and toxicity, used to determine the need for a response action

renal of or pertaining to the kidney

renal pelvis the funnel-shaped cavity in the central part of the kidney into which urine is discharged before passing into the urinary bladder

reportable quantity the quantity of a hazardous substance that triggers mandatory immediate reports to the National Response Center, state emergency response commissions, and local emergency planning committees if equaled or exceeded in releases to the environment

respirable fibers fibers that can reach the deepest part of the lungs, usually defined as particles with an aerodynamic diameter less than 3 μm , length greater than 5 μm , and aspect ratio of greater than 3:1

respirable fraction the fraction of inhaled particles or fibers that is respirable

respiratory tract the structures and organs involved in breathing, including the nose, pharynx, larynx, trachea, and lungs

reticuloendothelial system collectively, cells throughout the body that help filter out dead and toxic particles and identify foreign substances in the blood and tissues (also called the macrophage system or the mononuclear phagocyte system)

reticulum-cell sarcoma a malignant tumor derived from connective tissue

retinoblastoma a tumor of the retina (the light-sensitive layer of tissue at the back of the eyeball)

retrospective study an epidemiological study based on information collected from past records

retroviral of or pertaining to a retrovirus

retrovirus an RNA virus that can make a DNA copy of its genome and insert it into the host cell's DNA

reverse transcriptase an enzyme that catalyzes the formation of DNA from an RNA template

rhabdomyofibrosarcoma a malignant soft-tissue tumor that resembles fibrosarcoma but has characteristics of rhabdomyosarcoma
rhabdomyosarcoma a malignant tumor arising from skeletal muscle cells

rheumatoid arthritis a chronic disease of the joints, marked by inflammatory changes in joint structures

rhinitis inflammation of the mucous membrane of the nose

rhombic denoting a crystal having three axes of unequal length, each of which intersects at right angles with the others

risk assessment a systematic assessment of the likelihood that harm may occur from exposure to a hazard

rodent any mammal of the order Rodentia, which includes rats, mice, hamsters, gerbils, guinea pigs, hedgehogs, and other related species

rodenticide a substance used to kill rodents

S

salivary glands exocrine glands in the mouth that secrete saliva

sarcoma a type of tumor usually originating from connective tissue and usually malignant

schwannoma a tumor originating from Schwann cells (glial cells of the peripheral nervous system)

scirrhous carcinoma a malignant tumor that contains dense connective tissue

scleroderma hardening and thickening of the skin

scrotum the pouch that contains the testes and their accessory organs

sebaceous pertaining to a gland in the skin that secretes an oily substance into the hair follicles

secretory of, pertaining to, promoting, or produced by secretion

seminal vesicles tube-like glands located behind the urinary bladder that secrete a fluid component of semen

sensitivity (in reference to clinical testing) the ability of a clinical test to correctly identify those patients with the disease (the true positive rate)

sensitizer a substance capable of inducing allergy following exposure, such that it causes an allergic response on subsequent exposure

serological pertaining to measurement of the levels of pathogens or antibodies in the blood

seropositivity the state of having blood serum that tests positive for the presence of a given pathogen or antibody

seroprevalence the rate of seropositivity in a population

serum (of blood) the component of blood that is neither a blood cell nor a clotting factor

short-term exposure limit as defined by the National Institute for Occupational Safety and Health, a 15-minute time-weighted-average exposure that should not be exceeded at any time during a workday

sinonasal of or pertaining to the nasal and sinus cavities

sintering forming a solid and compact mass of material by heating or pressure without melting

sister chromatid exchange the exchange of genetic material between two identical sister chromatids during mitosis; measured as an assay for DNA damage

smooth muscle muscle tissue not under voluntary control, found in the walls of hollow organs

solubility the ability of a substance to dissolve in another substance and form a solution. The Report on Carcinogens uses the following definitions (and concentration ranges) for degrees of solubility in a specified solvent: (1) miscible (see definition), (2) freely soluble—capable of dissolving to a high degree (> 1,000 g/L), (3) soluble—capable of dissolving (10–1,000 g/L), (4) slightly soluble—capable of dissolving to a limited degree (1–10 g/L), and (5) practically insoluble—incapable of dissolving to any significant extent (< 1 g/L).

somatic cells all cells in the body except for the sperm and egg cells

somatic hypermutation a mechanism in which B cells undergo complex rearrangement of their DNA to code for antibodies

SOS chromotest an assay for whether a substance damages DNA in the bacterium *E. coli*

specific gravity the ratio of the density of a substance to the density of a standard substance, usually water for liquids and air for gases

specificity (in reference to clinical testing) the ability of a clinical test to correctly identify those patients without the disease (the true negative rate)

spindle-cell sarcoma any sarcoma composed of spindle-shaped cells

spleen a large, vascular, lymphatic organ in the upper abdominal cavity that stores blood cells, removes worn out red blood cells and other debris, and initiates immune responses to antigens in the blood

squamous cell a flat, scale-like epithelial cell

standardized incidence ratio the ratio of the observed to the expected incidence of a specific health outcome, based on the incidence in the larger population from which the study sample was taken

standardized mortality ratio the ratio of the observed to the expected numbers of deaths due to a specific cause, based on the number of deaths from that cause in the larger population from which the study sample was taken

statistically significant in statistical hypothesis testing, likely not due to random chance

stem cell a simple, unspecialized cell that is able to develop (differentiate) into any kind of specialized cell

stereoisomers molecules containing the same numbers and kinds of atom groupings but in different spatial arrangements

steroid hormone any hormone secreted by the adrenal cortex, testes, ovaries, or placenta

stroma the supporting tissue of a gland or organ, as distinguished from its functional cells

stromal of or pertaining to the stroma

subchronic in rodent testing, refers to an exposure schedule lasting from one to three months (of a duration between acute and chronic)

subcutaneous beneath the skin

summary odds ratio a weighted combination of the odds ratios estimated from more than one study

superalloy an alloy capable of withstanding high temperatures, high stresses, and corrosive conditions

synergistic pertaining to the interaction of two agents to produce an effect greater than the sum of the agents' individual effects

systemic pertaining to or affecting the body as a whole

systemic lupus erythematosus a chronic autoimmune disease of the connective tissue that affects the skin, joints, kidneys, nervous system, and mucous membranes

T

T cell a white blood cell that matures in the thymus and differentiates into one of several types of T cells with various functions in the immune system (also known as a T lymphocyte)

technical grade the lowest purity standard applied to a chemical; contains impurities

teratogen an agent that causes physical defects in developing embryos following exposure of the mother during pregnancy

testosterone a steroid hormone that plays a key role in the development of male reproductive tissues and male characteristics

thoracic pertaining to or located in the chest

thorax the chest

threshold limit value the concentration of a substance to which a worker can be exposed routinely for a lifetime without adverse health effects

thymine one of the two pyrimidine bases in DNA; pairs with adenine

thymus a lymphoid gland located in the upper chest that produces T cells in the young of most vertebrates

thyroid gland an endocrine gland located at the base of the neck that produces hormones involved in regulating metabolism

time-weighted average the average concentration of a chemical measured over a period of time

topical pertaining to application of a substance directly to a specific part of the body, affecting only that part of the body

toxic of or pertaining to a poison

toxicity the quality, relative degree, or specific degree of being poisonous

toxicokinetics the study of the change in concentration of a chemical and/or its metabolite in the blood or body tissues over time

toxoplasmosis a disease resulting from infection with the protozoan parasite *Toxoplasma gondii*, which rarely causes symptoms but may cause serious disease in infants or in adults with weakened immune systems

trachea the cartilage-ringed tube that connects the larynx and bronchi (also called the windpipe)

tracheal of or pertaining to the trachea

tracheobronchial of or pertaining to the trachea and bronchi

trans-activation activation of a gene by a diffusible regulatory factor

transcript (in genetics) a sequence of RNA produced from a DNA template

transcription the first step in gene expression, where the genetic code of a particular segment of DNA is transcribed into RNA, which serves as a template for protein synthesis

transcription factor a protein involved in the process of transcription of DNA into RNA

transcriptomics the study of the complete set of all RNA transcripts produced in one cell or in a population of cells

transgenic pertaining to an organism whose genome includes DNA derived from an unrelated organism; also used to describe the foreign DNA

transition elements elements that have electrons in their two outermost orbitals that can bond with other elements, and therefore share a number of chemical properties (also called transition metals)

translocation a chromosome abnormality caused by transfer or exchange of DNA segments between two chromosomes that contain different genes from each other

transplacental through the placenta

transversion a mutation in DNA that involves substitution of a purine for a pyrimidine or vice versa

trichofolliculoma a benign tumor originating from a hair follicle

trichomoniasis infection by protozoan parasites of the genus *Trichomonas*

trigonal denoting a crystal that has three equal axes separated by equal angles that are not right angles

tubular adenocarcinoma a malignant tumor arising from the lining of the tubules of the kidney

tubular-cell adenoma a benign tumor arising from the lining of the tubules of the kidney (also called renal adenoma)

tumor a growth of abnormal tissue resulting from excessive cell division (also called a neoplasm)

tumorigenic having the ability to cause tumors

tumorigenicity the ability to cause tumors

tunica albuginea a dense white fibrous sheath that encloses a body part or organ

tunica vaginalis the membrane that covers the testis and the duct leading out of the testis

U

ulcer an open sore on an external or internal surface of the body

ulcerative colitis the chronic, recurrent occurrence of open sores in the colon

upper respiratory tract the nasal and oral cavities, pharynx, larynx, and trachea

urea the main nitrogen-containing compound produced when protein is broken down through metabolism

urease an enzyme that catalyzes the breakdown of urea to ammonia and carbon dioxide

ureter the tube that carries urine from the kidney to the urinary bladder

urinary bladder the sac in which urine is stored before being excreted

urinary tract the organs and ducts involved in producing and eliminating urine

urothelial of or pertaining to lining of the urinary tract, including the renal pelvis, ureters, urinary bladder, and urethra

urticaria pigmentosa the widespread accumulation of mast cells in the skin (mast cells are a type of white blood cell that play a role in inflammation and allergic reaction)

uterus in female mammals, the hollow muscular organ in which the embryo develops into a fetus

V

vagina the passage leading from the uterus to the outside of the female body

vaginal of or pertaining to the vagina

valence the combining power or affinity of an element, measured as the number of hydrogen atoms it combines with

vapor density the ratio of the weight of a given volume of one gas to the weight of an equal volume of another gas at the same temperature and pressure

vapor pressure the pressure exerted by a vapor in equilibrium with its solid or liquid phase

vascular of or pertaining to the blood vessels

vehicle in animal testing, the substance in which a test substance is dissolved or mixed for administration

vehicle control group in animal testing, a negative control group that receives only the vehicle, not the test substance

vertebrate any animal that has a spinal column; vertebrates include fish, reptiles, amphibians, birds, and mammals

vesicle a small sac containing liquid

viral load the concentration of virus particles in body fluids

virion the infectious form of a virus as it exists outside the host cell, consisting of a core of DNA or RNA surrounded by a protein coat

viscosity resistance to flow

viscous having a high resistance to flow

vitamin any of a group of substances that are found naturally in many foods, are necessary in small quantities for good health and normal development and functioning; designated by a capital letter and sometimes a number

vitiligo a chronic disorder in which white patches appear on the skin as a result of the loss of the cells that make pigment

volatilize 1. (*transitive verb*) to cause a substance to disperse in the form of vapor (evaporate) 2. (*intransitive verb*) to disperse in the form of vapor

W

Waldenström macroglobulinemia a chronic lymphoma originating in B cells

Wegener granulomatosis a progressive disease characterized by tumor-like lesions of the respiratory tract and inflammation of the bronchioles, progressing to inflammation of all organs of the body

western blot immunoassay a technique that uses antibodies to detect specific proteins in homogenates or extracts of tissue samples

white pulp the portion of the spleen consisting of lymphatic tissue, mainly white blood cells

Wilms tumor a rapidly developing malignant tumor of the kidneys, usually affecting children under age five

X

xenobiotic a chemical foreign to the organism or biological system in which it is found

Z

Zymbal gland any of several sebaceous glands surrounding the external ear canal in rodents
