

Attention: Scientific Advisory Committee on Alternative Toxicological Methods Meeting

Date received: September 3, 2025

Federal Register Notice: (90FR29572-29573)

Private Citizen

Comments: "Animal research is a cornerstone of modern pharmacology and medicine. It is a foolish decision to substitute unproven 'novel alternative' methodologies. The people pushing this concept are the same ones that will blame the NIH when it fails but never give it credit for the decades of advances obtained under nonpartisan governance."
